Maturity on October 2032[2]	$103.76	▲ $ 104.25	% 7.30	▼ % 7.20

(Table showing the performance of Egyptian sovereign sukuk on 31/07/2026)

Egypt's international sovereign sukuk recorded a positive performance during the trading week ended (31/07/2026), as the prices of both outstanding issuances increased, accompanied by a decline in their yields to maturity, as shown in the table above.

This performance came amid market reactions to several global economic developments, most notably the U.S. Federal Reserve's decision to maintain the target range for the federal funds rate at 3.50%–3.75%, on Wednesday (29/07/2026)[3]. This decision strengthened expectations of monetary policy stability in the coming period and improved investor sentiment toward debt instruments in emerging markets, which was positively reflected in the performance of Egypt's international sovereign sukuk.

Meanwhile, U.S. Treasury yields continued to rise across various maturities. Although higher Treasury yields generally exert downward pressure on debt instruments in emerging markets, Egypt's international sovereign sukuk maintained their positive performance, supported by improved investment demand.

Overall, the movement in prices and yields during the week reflects continued improvement in investor confidence in Egypt's international sovereign sukuk, despite the ongoing external challenges posed by rising U.S. Treasury yields. This indicates a relative improvement in market perception of Egypt's sovereign risk and the continued attractiveness of the country's sovereign sukuk issuances to international investors.
